RW-OVR

OFFSET VIBRATORY ROLLER ATTACHMENT

KEEP YOUR WHEELS ON THE ROAD WHILE COMPACTING HARD-TO-REACH SLOPES

The RW-OVR™ uses a patented offset design that lets the host machine remain on flat, stable ground while compacting road shoulders, ditches, trenches, and outside slopes.

It attaches with an SAE quick connector coupling and works with skid steers, compact track loaders, and road graders. Standard and high-flow hydraulics are supported, with remote-control capability for convenient operation.

The vibratory roller compacts stone, asphalt, RAP, dirt, topsoil, sand, gravel, crushed stone, recycled materials, and limestone. Its compact design fits on a trailer with the host machine, so no travel permits are required.

KEY FEATURES

Unrivaled Safety
Offset design keeps the host machine on flat, stable ground and helps eliminate rollover risk.

Host Machine Compatibility
Compatible with skid steers, compact track loaders, loaders, and road graders.

Standard + High-Flow Hydraulics
Works with standard and high-flow machines; high-flow units operate in standard-flow mode.

Remote Control Capability
Operate functions from the host machine cab for convenient, productive compaction.

Multiple Materials
Compacts asphalt, RAP, dirt. topsoil, sand, gravel, crushed stone, recycled materials, and limestone.

Interchangeable Drum Options
3ft and 4ft drum widths using the same offset arm.
